

Year 12 Architects learn from the best

Year 12 Design and Technology students recently learnt from industry experts about computer-aided design and model manufacture. Company Director and Meriden parent Justin Loe and graduate architect Nidhi Mallikarjuna generously shared their time and expertise, a valuable opportunity that the girls made the most of.

The students involved are working on their architecture-based Major Design Projects, which account for 60% of the final course mark.

On the day, students had the task of creating a model for a student housing project focusing on community living. They aimed to maximise building functionality with a focus on scale and proportion in the architecture. Each girl designed one room as part of the larger project. The end product: a 3D model for the whole student housing complex building.

The girls were able to ask many questions about architecture, the design process and software used in the industry.

We are very thankful on behalf of the students to Justin and Nidhi from Studio JLA for providing this valuable opportunity.
